

# Droptune Firmware Update for OSX

## Step 1:

Unpack the firmware.bin file from the downloaded package to the desktop.

## Step 2:

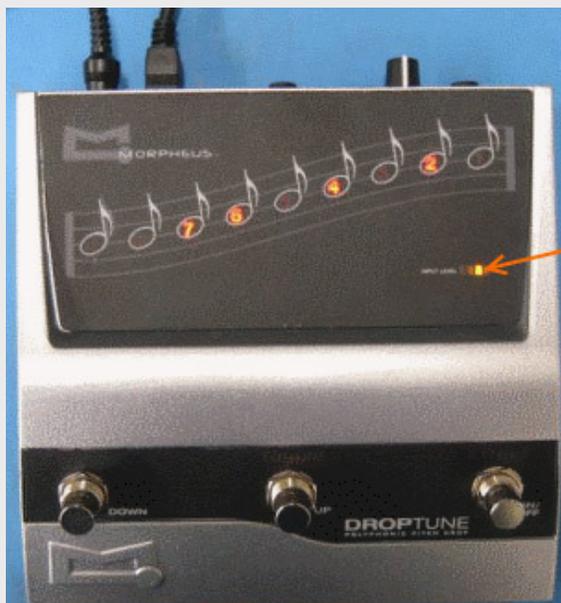

Press and hold Up/Toggle Button while Plugging In the Power

Wait for Drop Tune to Initialize  
When the 2nd Level LED (green)  
lights, Initialization is complete

You can now release the  
UP/Toggle Button

## Step 3:

Plug in the USB cable and wait  
for USB to Initialize

Once the USB has initialized,  
the 3rd Level LED (amber)  
will light.

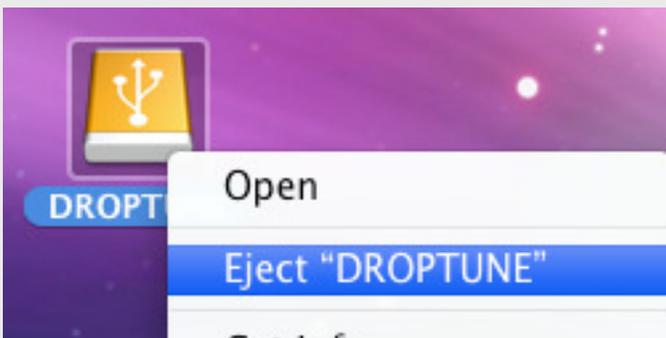

When connected, the Droptune USB volume should appear on the desktop.

**Step 4:**

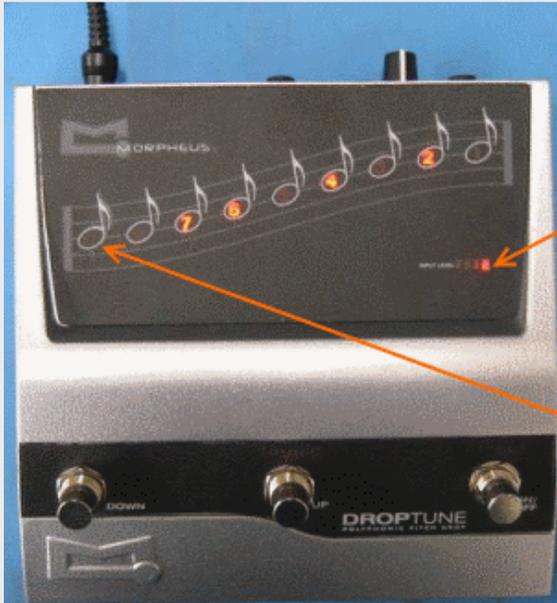

Drag the firmware.bin file to the Droptune volume.

Eject the Droptune volume before unplugging the USB cable.

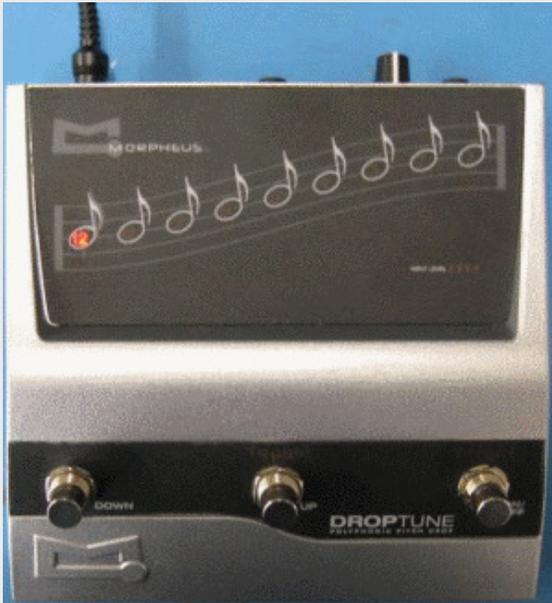

**Step 5:**

Unplug the USB cable from the DROPTUNE.

The 4th Level LED (red) will then flash for about two minutes while the DROPTUNE is programming the firmware

**NOTE:**  
Do **NOT** disconnect power cable until you see the 12+ LED turn on.

Wait for Programming to Complete

12+ LED will light when the process is finished

**When the programming is complete, cycle power on the DropTune and it is ready to use.**
